

How casual rides and annual members use Cyclistic bike differently

File created: 09/03/2026 12:21:51

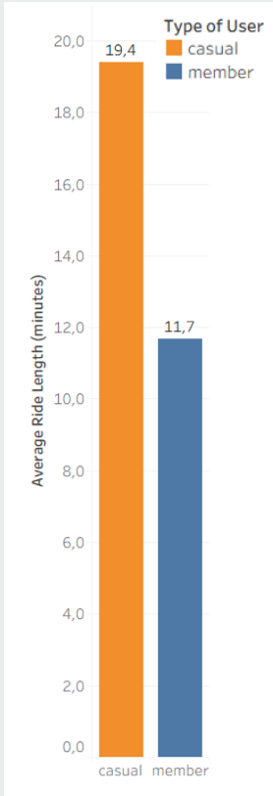

Business question

How can Cyclistic convert casual riders into annual members?

This analysis explores behavioral differences between casual riders and annual members using ride duration, weekly usage patterns, and seasonal trends.

Casual Riders take longer trips

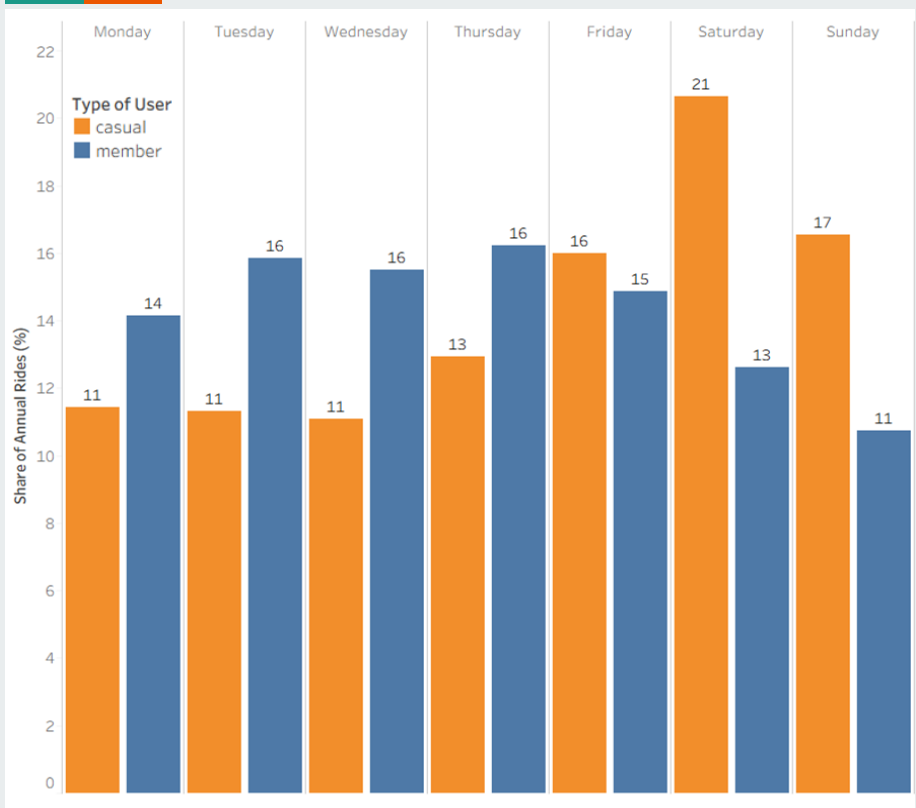

Casual riders average 19.4 minutes per trip, while members average 11.7 minutes.

This suggests casual users primarily use bikes for **leisure activities**, whereas members rely on them for shorter, **functional trips** such as commuting.

Casual Riders prefer weekends

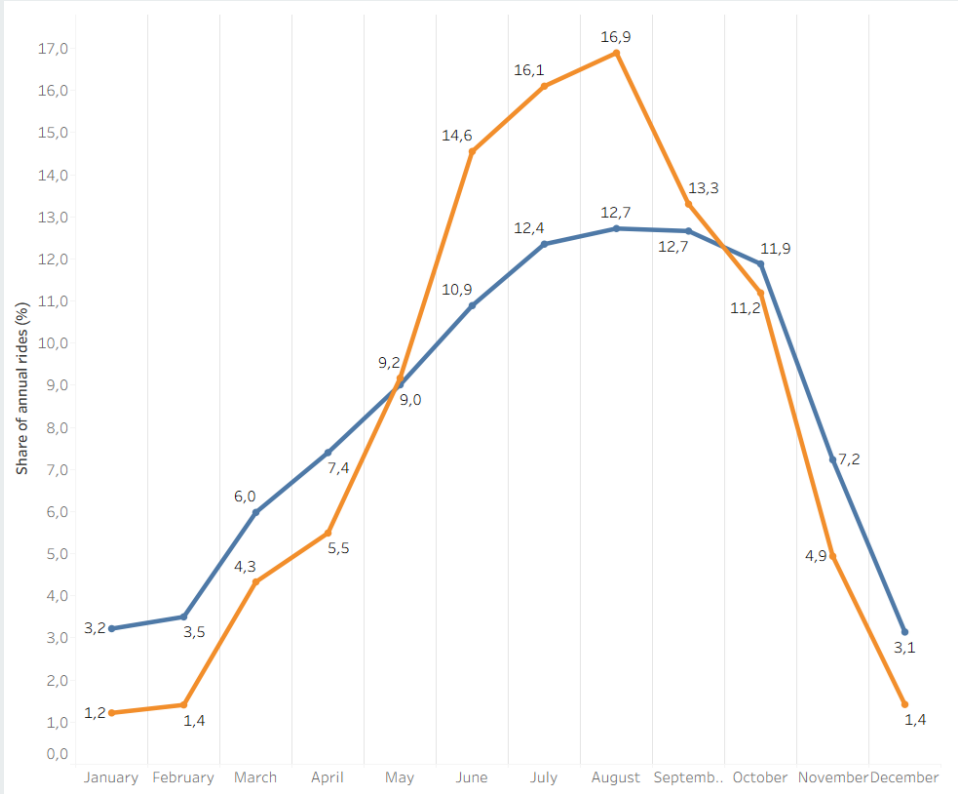

Casual riders show **strong weekend usage**, with Saturday accounting for about 20.6% of rides and Sunday for 16.5%.

Members ride more consistently throughout the **week**, with weekday rides typically around 14–16% of their annual trips.

Seasonal Ride Patterns

Casual riders heavily concentrate their rides in **summer**, with July and August alone accounting for more than 30% of annual casual rides.

Members ride more consistently **throughout the year**, indicating that they rely on the service as part of their regular mobility routine.

Business Recommendations

1. Promote annual memberships **during summer** when casual usage peaks.
2. Introduce targeted **weekend-to-weekday promotions** encouraging casual riders to adopt bikes for commuting.
3. Offer **limited-time membership** trials to convert frequent casual users into long-term members.
